Art Unit: 1722

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14, 15, 17-19, 21, 23-26 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 836,923.

EP 836923 discloses a tool for multi-component injection molding of plastic toothbrush bodies, the tool comprising two mold halves 4,6,8,10 forming hollow mold spaces and configured to move apart into an open position and to move together into a closed position, a transfer device 15 integrated into a first one of the two tool halves and immersible into the first tool half, wherein the transfer device is configured to transfer injection molded blacks 25 formed in the first cavities into the second cavities for injection molding the second components, wherein the transfer device in the closed position of the two tool halves is located outside of the first mold cavities.

Claims 16, 20 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The above claims define over the prior art since the prior art fails to disclose or suggest a T or L guide as well as vacuum suction cups on the transfer device as set forth in the claims.

The disclosure is objected to because of the following informalities: "heads 5" (page 6, line 8) or "transfer device 5" (page 6, line 9).
